

ABSTRACT

A vegetation cutting blade is rotatably attached to a deck which is vertically adjustably mounted on a frame which is supported by a pair of ground wheels on each side. Each pair of wheels is driving independent of the other by a hydraulic motor mounted on the frame which is, in turn, driven by a hydraulic pump mounted on the deck. The cutting blade and the pumps are driven by a gasoline engine mounted on the deck. Radio remote controls separately control the engine, the pumps and a clutch to disengage the cutting blade. A retractable segment of the deck can be raised by remote control to facilitate the cutting of heavy brush and small trees.
